Free Radon Test Kit Distribution

January 16, 2019, Watertown, NY– January is National Radon Action Month and the Jefferson County Public Health Service (JCPHS) would like to remind residents to test their homes for radon. **Beginning at 8:30am on Thursday, January 17, 2019** JCPHS will be offering free radon detectors to the first 100 people. The process is simply filling out a one page form, following the directions for testing, and mailing the detector to the lab in the postage paid envelope.

According to the Environmental Protection Agency (EPA), approximately 21,000 people die from radon-induced lung cancer each year. Radon is an invisible, odorless and tasteless gas, and the leading cause of lung cancer in non-smokers. Approximately 28 percent of home tested in Jefferson County have radon levels of ≥ 4 pCi/L which is the EPA's "action" limit and 21% of Jefferson County homes with $2 < 4$ pCi/L which the EPA suggests that homeowners "consider action". Radon is naturally occurring, and disperses in outdoor air, but it can reach harmful levels when trapped in buildings. Homeowners can test their homes at any time; however, it is best to do so during the heating season when homes typically let in less outdoor air. Every home should be tested initially and tested again every 5 years, after major renovations, weatherization or installation of a radon mitigation system. You can track radon testing and levels in Jefferson County using the NYS Department's Radon Indicator at <https://on.ny.gov/2CkgR9Z>.

"Testing is the only way to know if you and your family are at risk from radon. Radon testing is easy and problems can be mitigated. If you find your home needs radon mitigation, use a qualified radon mitigation contractor", said Ginger Hall, Director of JCPHS. Many homes can be fixed for about the same cost as other common home repairs.

If you are building a new home, ask for radon-resistant construction features then test after your home is finished. For more information about Radon, go to SOSradon.org.
