- 1.15 The design and manufacture of the scale weighbridge, load cells and digital instrument shall all be of one manufacturer to maximize compatibility and availability of components and to insure maximum benefit from the system's lightning protection capability. Also, the manufacturer shall

have a quality system that has been registered to the standards of ISO 9001.

- 1.16 The manufacturer or bidder shall provide with the bid proposal, a listing of the total cost (labor, parts, travel time, and mileage) for two service technicians to travel to the scale site with a heavy duty test truck, stay on site for four (4) hours to troubleshoot and replace one load cell in the scale and the main printed circuit board in the weight display. This listing shall be provided for service in the following three timeframes: 6 months after installation, 36 months after installation and 58 months after installation. Listings of the same costs at these three time periods must also be provided assuming the failure is a result of a lightning strike. The cost of recalibration must be included in each service cost summary. Failure to provide the information required in this section will cause your bid submittal to be considered non-responsive and disqualified from consideration.
- 1.17 The scales shall be a METTLER TOLEDO Model VTS231 or equivalent.
- 1.18 Bidder must be able to provide parts and service within 4 hours after contact. Bidder must be able to provide a negotiated preventative maintenance program twice a year.

2. SCALE FOUNDATION REQUIREMENTS

Bidder must be able to provide a technical assistance and specifications for the foundation being constructed by Jefferson County as well as wiring schematics, locations, and specifications outside the wiring provided with this scale bid. Coordination with the construction of a new scale house will be necessary for a compatible 'end product'.

3. WEIGHBRIDGE SPECIFICATIONS

- 3.1 The scale weighbridge shall be constructed of four (4) prefabricated scale modules each with a nominal surface dimension of 11' wide by 20' long.
- 3.2 The scale weighbridge shall be capable of weighing trucks that have dual tandem axle weights (4 feet minimum between dual axles and at least 10 ft from next axle) of up to 80,000 pounds, and shall have a Concentrated Load Capacity (CLC) of 100,000 pounds
- 3.3 All welding shall be completed in accordance with the American Welding Society (AWS) D1.1 Structural Welding Code.
- 3.4 All welding shall be performed by welding operators who have been certified to the AWS D1.1 Structural Welding Code.
- 3.5 All welding shall be performed in position 1F to ensure maximum weld integrity.
- 3.6 Longitudinal weighbridge members shall be welded continuously, using a high-penetration, submerged arc welding process. The use of intermittent or stitch welds on longitudinal members or deck tread plate is unacceptable.
- 3.7 The weighbridge shall be designed to allow access to load cell cables, base plates, and all foundation anchor bolts from the top of the scale platform.
- 3.8 The weighbridge and load cell mounting assemblies shall be designed to allow installation or replacement of a load cell with only one additional inch of clearance required between the top of the foundation and the bottom or the weighbridge on pitless installations.
- 3.9 There shall be no bolted connections between the load cell and weighbridge assemblies.
- 3.10 The load cell assembly shall be designed so that when you are at the scale weighbridge with a lifting jack, the load cell can be replaced in less than 5 minutes.
- 3.11 There shall be no field welding required for the installation of the scale.

4. SURFACE PREPARATION AND FINISH

- 4.1 The weighbridge shall be shot blasted to a minimum SSPC-SP6 specification prior to painting.
- 4.2 All enclosed chambers created by joining two steel members must be hermetically sealed to eliminate internal corrosion.
- 4.3 All exterior surfaces of the scale shall have a two-component, high-build epoxy finish,

impregnated with aluminum flake for increased corrosion resistance and UV protection, providing total Dry Film Thickness of 8-10 mils (International/Akzo Nobel Intergard 7562 or equivalent).

4.4 The finish shall be force cured in order to reduce risk of contamination and ensure durability of the surface.

5. LOAD CELL SPECIFICATIONS

- 5.1 Each load cell shall have a minimum capacity of 50 metric tons (110,000 pounds) with 300% ultimate overload rating.
- 5.2 All load calls shall be certified by NTEP and meet the specifications as set forth by NIST HB-44 for Class IIIL devices. The manufacturer shall provide a Certificate of Conformance to these standards upon request.
- 5.3 All load cells shall be certified to meet the specifications set forth by the International Organization of Legal Metrology (OIML) in document R60 for C3 load cells, which requires 60% tighter accuracy tolerances than NIST HB-44 for Class IIIL devices. The manufacturer shall provide a Certificate of Conformance to these standards upon request.
- 5.4 Load cells shall be digital with an integral microprocessor and analog-to-digital conversion function located within the load cell housing
- 5.5 Load cells shall output only converted digital information without load correction for load position to the scale instrument. Analog output of signals from the load cell is not acceptable due to susceptibility of signal interference.
- 5.6 The load cell assembly shall be constructed so as to perform as a rocker pin and shall have no positive fixed mechanical connectors, such as bolts or links that are required in mounting the load cell to the weighbridge or foundation base plates.
- 5.7 The load cell shall not require check rods, flexures or chain links for stabilization, as these items are sources of ongoing maintenance requirements.
- 5.8 The load cell shall not require a junction box to communicate between the load cell and scale instrument. No other devices shall be permitted between the load cell and the digital weight display. Junction boxes, summing boards, gathering boards, gathering boxes, totalizers, external analog-to-digital converter boxes, and sectional controller boxes will not be accepted because of their significant and inherent maintenance issues.
- 5.9 The load cell shall be of stainless steel construction and hermetically sealed with a minimum NEMA 6P / IP68 (submersible) and IP69K rating
- 5.10 The load cell shall contain integral Transient Voltage Surge Suppressors (TVSS) for all input and communication lines. Each TVSS shall contain self-resetting thermal breakers to protect the load cell components from voltage and current surges.
- 5.11 The load cell shall come equipped with a neoprene rubber boot to keep debris from contaminating the lower bearing surface.
- 5.12 The load cell shall have a positive-lock quick connector integral to its housing for connecting and disconnecting the load cell interface cable at the load cell. The connector shall be a glass-to-metal, pin-type construction to maintain a hermetic seal.
- 5.13 System shall be so designed as to permit a load cell cable to be replaced without either splicing the load cell cable or replacing the load cell, either of which will contribute to eventual system failure and unnecessary service costs. System shall be so designed as to permit the replacing the load cell cable without requiring that the scale must be recalibrated, further reducing service and maintenance costs.
- 5.14 The load cell shall have the following specifications:
 - 5.14.1 Vmin: 5.0 pounds maximum
 - 5.14.2 Hysteresis: +/- 0.025% of full scale
 - 5.14.3 Non-Linearity: +/- 0.015% of full scale
 - 5.14.4 Creep (30 minutes): +/- 0.017% of applied load

5.14.5 Temperature range: -10°C + 40°C

- 5.15 The load cell interface cable shall be stainless steel sheathed for environmental and rodent protection. Neoprene covered load cell cable shall not be permitted.
 - 5.15.1 Load cells cables which are hard wired directly to the load cell are not acceptable due to the failure rates associated with moisture wicking into the load cell from aged cables or damaged cables, and due to the unnecessary expense associated with replacing entire load cells when only a cable has been damaged.
- 5.16 The load cell shall have a minimum 10-year warranty against defects in materials and workmanship and failure resulting from lightning or surge voltages. The warranty shall cover all costs associated with replacement parts, travel, mileage, on-site labor, and recalibration after repair, the full cost of which shall be supported solely by the manufacturer and not in part by any other third party.
- 5.17 Load cells shall be METTLER TOLEDO POWERCELL® PDX® load cell or equivalent.

6. JUNCTION BOXES AND CABLES

- 6.1 Junction boxes shall not be permitted in the scale, attached to the exterior of the scale, or remotely mounted from the scale. Sectional controllers with encapsulated PCBs shall not be permitted due to the failure rates associated with PCBs that have wired connections made within enclosures which are note hermetically sealed.
- 6.2 Load cell cables and scale instrument cables shall be stainless steel sheathed for environmental and rodent protection.
- 6.3 In order to minimize maintenance issues, only a single cable shall be used to transmit data or weight signals between the weighbridge and the digital weights display.

7. LIGHTNING PROTECTION SPECIFICATIONS

- 7.1 A comprehensive lightning protection system shall be provided with the scale.
- 7.2 The system shall not require complicated wiring or devices to provide this protection.
- 7.3 Major scale components including load cells and scale instrument (terminal) shall be included in the lightning protection system.
- 7.4 Grounding of all scale components including load cells, scale instrument, and accessories shall be to one common point. Systems with multiple ground points are not acceptable.
- 7.5 An AC line surge protector shall conveniently plug into a common electrical outlet and have a receptacle.
- 7.6 Each AC line surge protector required shall have one isolated, grounding, hospital-grade duplex receptacle, and an internal 15-amp circuit breaker.
- 7.7 Verification of the lightning protection system's performance shall be available in writing from a third-party verification laboratory upon request. Proposals submitted without confirming the availability of third-party verification that the load cells, cables, and instrument as a system have been able to withstand the equivalent of a lightning strike with 80,000 amperes will be rejected.
- 7.8 The lightning protection system shall be a METTLER TOLEDO StrikeShield Lightning Protection System or equivalent.

8. WARRANTY REQUIREMENTS AND SERVICES

- 8.1 The scale manufacturer shall warrant the scale assembly including the weighbridge structure, scale instrument, and associated cables from failures due to a defect in manufacturing, workmanship, lightning or surge voltages.
- 8.2 The warranty be a minimum of one (1) year and shall support 100% coverage of repair parts, labor, travel time and mileage from the closest service location, or at the manufacturer's sole discretion, replacement of the product under warranty. The full cost of warranty as specified on bid page

shall be supported solely by the manufacturer and not in part by any other third party or service provider. Bidder shall promptly correct any such defect appearing within the warranty period.

9. ACCESSORIES

- 9.1 Six inch riser plates to access under scales.
- 9.2 Single height side rails (guiderails) on weighbridge.
